Rotaract Club of Xiamen University Malaysia | Rotary Club of Kuala Lumpur Dynamics | Rotary Club of Tun Razak Exchange

SDC Hackathon

Phase 1 : Preliminary Project Proposal

Hosted by Xiamen University Malaysia (XMUM) AI Club

Submission Deadline: 25 October 2026

Instructions: Complete every field below and submit as a single PDF document named "SDC2026_TeamName_Preliminary.pdf" before the deadline above. Answers must comply with the word limits stated for each open-ended question. Incomplete submissions may not be eligible for review.

SDC HACKATHON 2026

Phase 1: Preliminary Project Proposal

Hosted by Xiamen University Malaysia (XMUM) AI Club
Submission Deadline: 25 October 2026

Instructions: Complete every field below and submit as a single PDF document named "SDC2026_TeamName_Preliminary.pdf" before the deadline above. Answers must comply with the word limits stated for each open-ended question. Incomplete submissions may not be eligible for review.

1. Team & Project Overview

Team Name	YOLO
Selected Domain	2
Selected SDG Track (1–17)	8
Project / Solution Name	NudgeWise
Name (Leader)	WONG JIA SOON
Email & Phone (Leader)	wongjiasoon@gmail.com 011-11263048
University Affiliation(s)	UNIVERESITI TEKNOLOGI MALAYSIA
Number of Team Members	5

2. Executive Summary & Problem Statement

2.1 The Problem Context

Describe the specific, real-world challenge your team is tackling. Who is affected by this problem, and why does it matter? Highlight the critical social, environmental, or economic issues involved.

[Maximum 250 words]

Sellers manually compare invoices, payments and customer messages. This takes time and can lead to chasing customers who have paid, disputed an invoice or promised payment later.

- Reduce manual invoice-review and reminder preparation work.
- Prevent duplicate or inappropriate reminders.
- Explain which invoices need attention and why.
- Keep consequential actions under seller control.

2.2 The Proposed AI Solution

Provide a high-level overview of your proposed application. How does it apply artificial intelligence to solve the problem stated above? Briefly mention the tools or technical skills gained from the SDC Phase 1 workshops (e.g., GenAI APIs, database architecture, cloud hosting) that you intend to leverage.

[Maximum 300 words]

We will utilize the AI assistant that prepares the work—not the final decision.

The system will:

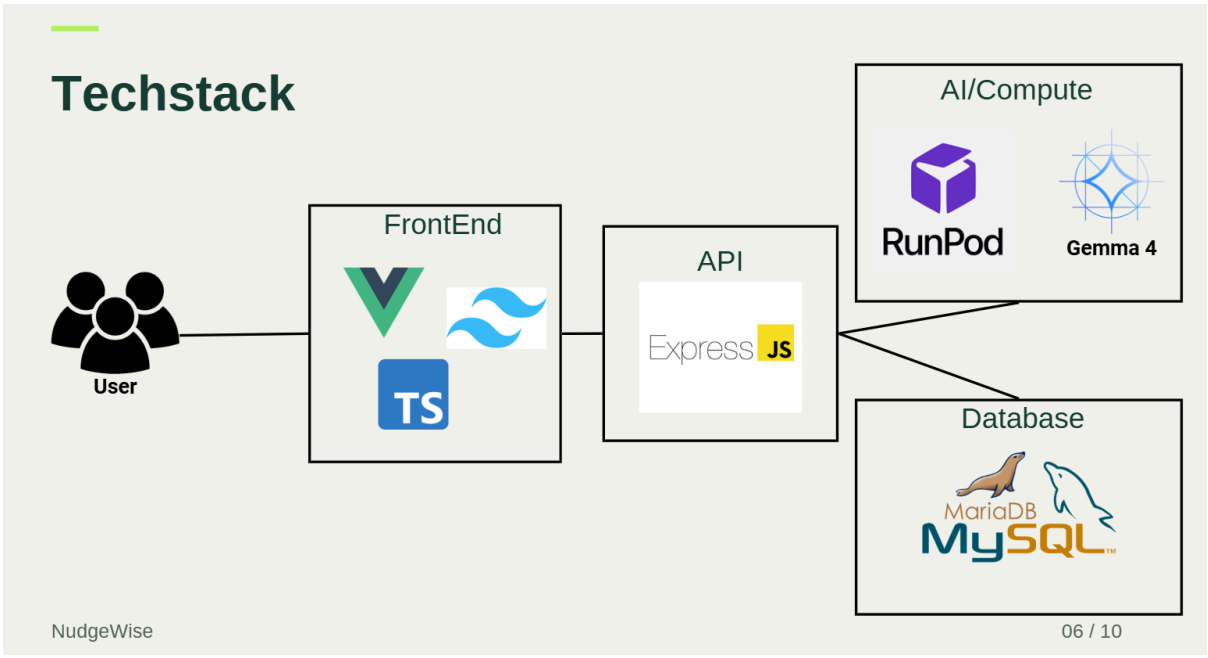

- Track outstanding balances and due dates
- Prepare reminders using verified invoice information
- Ask the seller to approve, edit or reject the exact message
- Surface exceptions that need human attention

3. Technical Architecture & Implementation Plan

3.1 Conceptual Tech Stack

List the technologies, frameworks, APIs, and databases you plan to use to build a functional, deployed prototype. Describe (or attach as an appendix) a simple system block diagram showing how the workshop elements connect into one architecture.

Did your project utilize any official SDC sponsor-provided GenAI API or Cloud Platform? If yes, specify which one and how it is used.

RunPod will help to host Gemma 4 LLM.

3.2 Design-Thinking & Deployment Strategy

Explain how your team applied design-thinking methodology to ensure this solution is technically viable, user-friendly, and ready for real deployment by Phase 2.

[Maximum 200 words]

We study the existing system Orbyte and the SQL invoice. Then based on members experienced working in the car accessories market. We decided to approach this solution. To validate our idea and approach, we reached out to Dr Shin who specializes in payment and realised that there are more potential problems than what we have scoped solutions for. Hence, we expand our idea more to support more of the invoice edge case scenarios.

4. Preliminary Environmental & SDG Impact Framework

To align with SDC's focus on meaningful global sustainability, establish your project's impact baseline before building the prototype. Use estimated data, published research, or public benchmarks where exact figures are unavailable. Provide the citation of any sources used.

The target, baseline, and KPI you provide here will be used by judges during shortlisting to assess ***Innovation and Creativity*** *as well as* ***Feasibility of build****. Vague or unsupported projections may weaken your case for advancing to Phase 2.*

Metric Category	**Your Response**
Target SDG Sub-Target(s) *Identify the exact UN SDG sub-target your project addresses* *e.g., Target 11.6 "Reduce the adverse per-capita environmental impact of cities, focusing on air quality and waste management."*	SDG 8 — Decent Work and Economic Growth Target 8.2 — Productivity through technology Reduce repetitive invoice-review and follow-up work. Target 8.3 — Support micro and small enterprises Help sellers manage outstanding invoices while keeping control of customer communication. Intended contribution; impact remains to be validated through seller testing.
Current Problem Baseline *What is the starting condition of the problem, expressed as a number?* *e.g., "The target infrastructure currently experiences 35% energy inefficiency due to unoptimized scheduling."*	1. Sellers check invoices, payments and customer messages manually across multiple platform. (email, Whatsapp, team....) 2. A reminder can be wrong when a customer has paid, disputed an invoice or promised payment. 3. This causes the supply chain contagion where buyer pays late, supplier's cash gap because of low cash flow and the delay spreads.

Metric Category	Your Response
Core Measurable KPI *The specific unit you will track* *e.g., % reduction in power consumption, processing-latency improvement, or kg of resource waste avoided.*	We are trying to reduce the review time by combining all of the information of the orders into one system and track the status of the invoice.
Phase 2 Impact Target *Your realistic, percentage-based target by the final prototype presentation* *e.g., "20% improvement in computational resource use."*	We are proposing to reduce the invoice-review time to 50% and handling more invoice at once.

5. Eligibility & Readiness Checklist

Tick all boxes that apply before submitting.

✅ All team members have completed the mandatory GenAI, Database, and Cloud Deployment upskilling workshops.

✅ The project concept addresses a verified real-world problem mapped directly to one or more UN SDGs.

✅ The proposed solution targets a functional, deployed application rather than a theoretical business case study.

✅ All fields in this template have been completed within the word limits stated.

6. IP & Originality Declaration

6.1 Pre-Existing / Prior-Owned Work

Does this submission include any code, design, research, or other work that any team member created or owned before the start of this hackathon?

☐ Yes ✅ No

If yes, briefly describe what was pre-existing and which team member(s) owned it:

6.2 Third-Party Code, Datasets, or Models

Does your project use any third-party code libraries, open-source frameworks, public/private datasets, or pre-trained AI models that your team did not create?

☐ Yes ✅ No

If yes, list them below (open-source use is permitted provided it is declared and properly licensed/attributed):

Name	Type (code/dataset/model)	License

6.3 Employment-Related IP Conflicts

Is any team member currently bound by an employment, internship, or consulting agreement under which their employer could claim ownership of work they create during this hackathon?

☐ Yes ✅ No

If yes, please describe the nature of the agreement and which member it concerns:

7. Declaration

By submitting this proposal, the team leader confirms that the information provided is accurate to the best of the team's knowledge and that the project will be original work created during the SDC 2026 hackathon period.

24 October 2026
